Kelair Pumps appointed sole Australian distributor for Dresser-Rand Turbines

In September 2005, the Dresser-Rand Group USA purchased the Tuthill Energy Systems USA business. Tuthill is an international manufacturer of single and multistage turbines, namely Coppus, Nadrowski and Murray, used widely throughout the energy industry.

Dresser-Rand is among the largest suppliers of rotating equipment solutions to the worldwide oil, gas, petrochemical and process industries with both single and multistage steam turbine products up to 70,000kW power.

"Dresser-Rand and Tuthill Energy have decades of experience providing innovative solutions in the energy conversion markets," said Bill Jones, President of Dresser-Rand's Steam Turbine Business Unit. "Both companies have maintained solid reputations for quality, efficiency, economy and reliability."

Kelair Pumps Australia Pty Ltd was chosen as the sole distributor for Australia based upon its support of the Tuthill Energy product range over many years, and its ability to offer a high level of technical support and service within the Australian market.

In order to assist in a smooth transition, Kelair's trained Sales Engineers will be contacting all Tuthill and Dresser-Rand turbine customers during the following weeks to discuss how best to support the combined product range so their businesses continue to operate smoothly.
